## Profile

SQUARE BAU was officially founded in 2004, in Arges. We work in a multidisciplinary team, with over 20 creative professionals such as architects, designers, engineers, urban planners and technicians. The extensive experience gained in 16 years, based on structured planning processes, result in high quality designs that are realized with technical expertise and great attention to detail.

## Our Goal

Our goal is to create vibrant, sustainable buildings that reach beyond themselves and become of durable value to the user and to the society and culture that they are built into. We shape, challenge and change the physical environment – from master plans, urban spaces and buildings to interior design, components and strategic design – with the overall objective of providing the user with a strong, visionary and thoroughly prepared design adapted to the specific context. Our ideas are developed in close collaboration with the client, users and partners in order to achieve long-lasting buildings and reduced life-cycle costs. This value-based approach is the key to our designs of numerous building projects - from complex master plans to successful architectural landmarks.

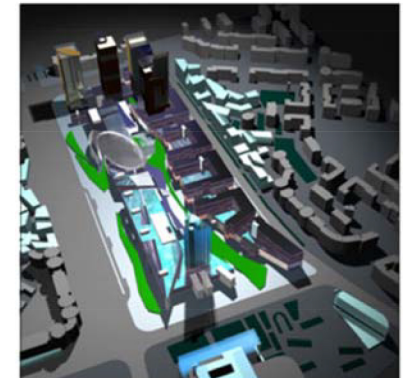

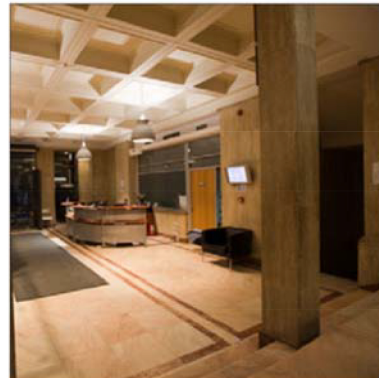

## Collaboration

The success of our projects is due to the capacity to gather and calibrate the team of collaborators with the specific skills and right dimension in order to fulfill the Client requirement.

Our competence is continuously developed through our close collaboration with partners, experts and specialists in various areas of activity like, structure engineering, mechanicals and equipment design, process experts, project management, finance, sociology, arts.

## Team

**HORATIU STAN** - Architect, Partner  
**CODRIN TRITESCU** - Architect, Partner  
**REDIN ABDURAMAN-TANIOR** - Architect, Healthcare Specialist, Partner  
**MIHAI BUTUCARU** - Architect, Project Manager - collaborator  
**CRISTINA MOCANASU** - Architect  
**ILEANA GALAI** - Architect  
**VASILE GHERGHEL** - Architect  
**IULIA MANITIU** - Architect  
**BOGDAN PIRVU** - Architect  
**IOLANDA SABO** - Architectural Technician  
**ALEXANDRA ARDELEANU** - Architect  
**DANA PAVAL** - Architect  
**ONAR STANESCU** - Architect  
**ANCA GHEONEA** - Junior Architect  
**PETRE FRANGULEA** - Junior Architect  
**ION HASCHI** - Engineer  
**PETRE CERNAIANU** - Engineer  
**CARMEN CERNAIANU** - Engineer  
**ANCA BOGEA** - Engineer  
**COSMIN MOGA** - Engineer

## Philosophy

We believe that good planning comes from integrating innovative design into existing urban structures while taking account of the specific challenges posed by a project.

This holistic approach is augmented by a strong commitment to the clients we serve. Our client relationships are therefore characterized by a high degree of personal service.

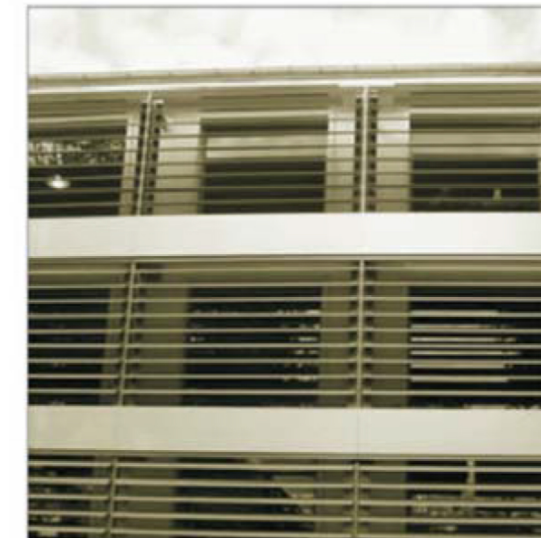

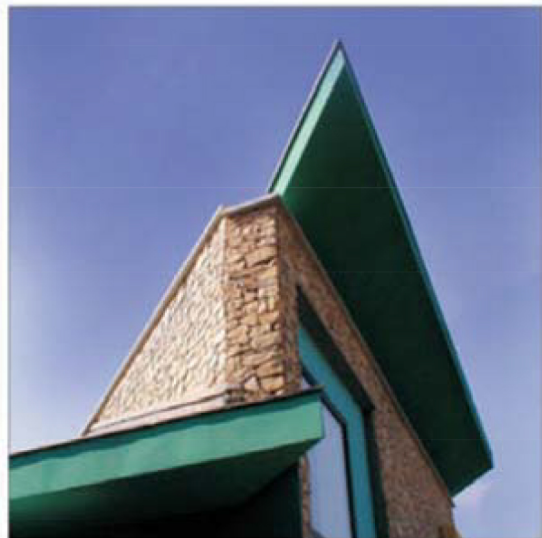

## Strengths

We have long-standing experience in coordinating diverse user groups and in integrating complex operations. Bringing together experts from all relevant fields, our projects thrive on the mutual inspiration of functionality and design.

## Skills

In the area of health care and research institutes, clients from the private and public domain rely on the tried and tested skills of our architects and medical facilities planners. We coordinate and organize highly complex construction projects and as construction managers we provide design and construction advice.

HOTEL & HOME FOR ELDERLY

## ■ Integrated Project Management

Our project management is based on dialogue and synthesis.

By establishing designs and structural concepts at an early stage we ensure that projects advance swiftly at all levels. We respect our clients resources of cost and time. Our departments work concurrently to achieve speedy completion.

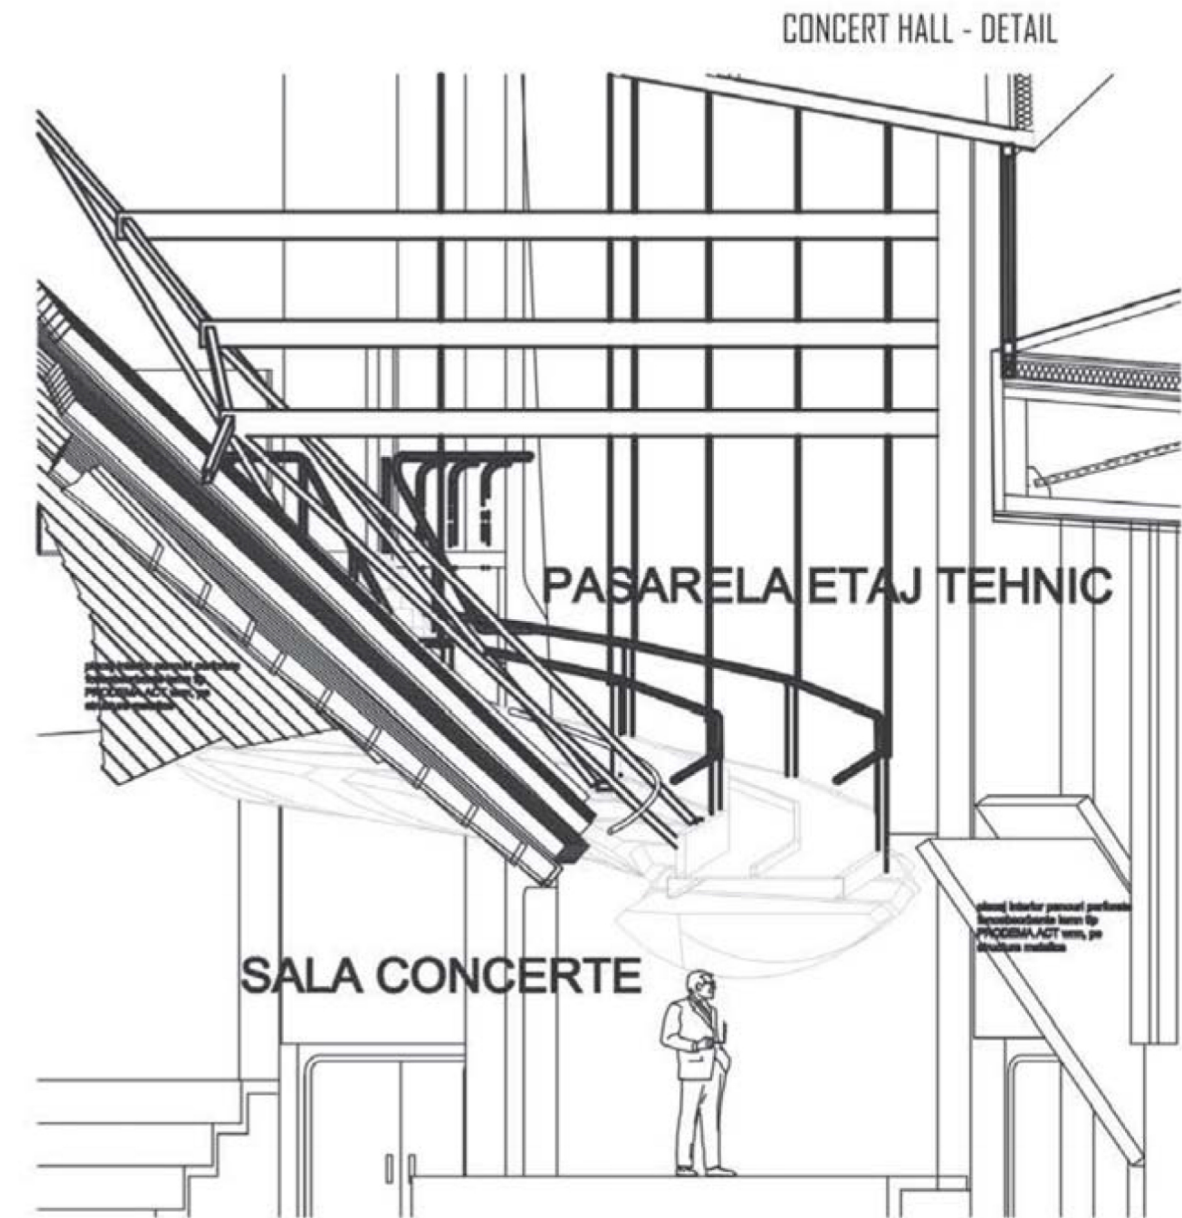

## ■ Project Documentation

Our project organization and operational processes follow the ISO 9001 standards for quality management. We record our projects in extensive, transparent documentation.

## ■ Facility Management

Integrative process management approaches enable us to offer premium facility and property management services. Our commitment does not end with the legal warranty period.

Clients can seek our general planners' advice at any time.

## ■ Surveys - Competitions

We analyze development potential, devise restructuring concepts and pursue targeted planning.

## ■ Cost Engineering

We advise investors on the best option in terms of construction, deadlines and costs. Our consultants are supported by comprehensive, database-assisted documentation.

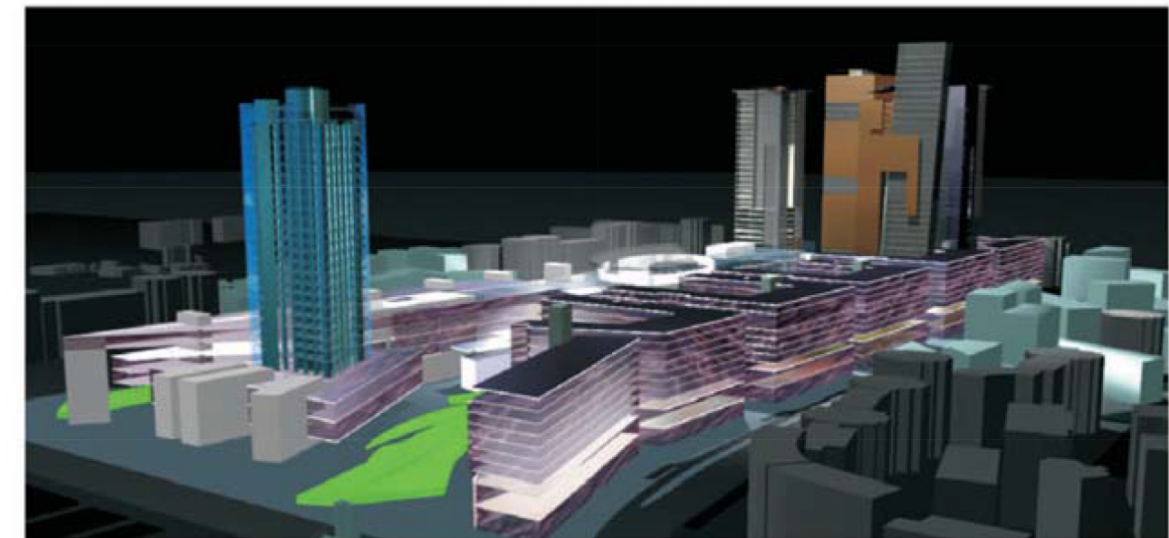

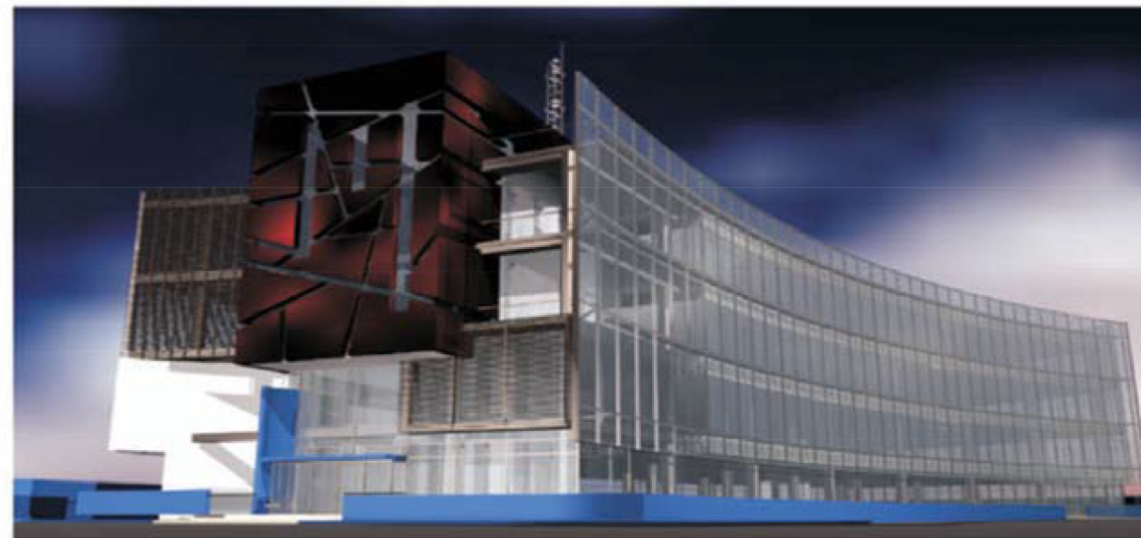

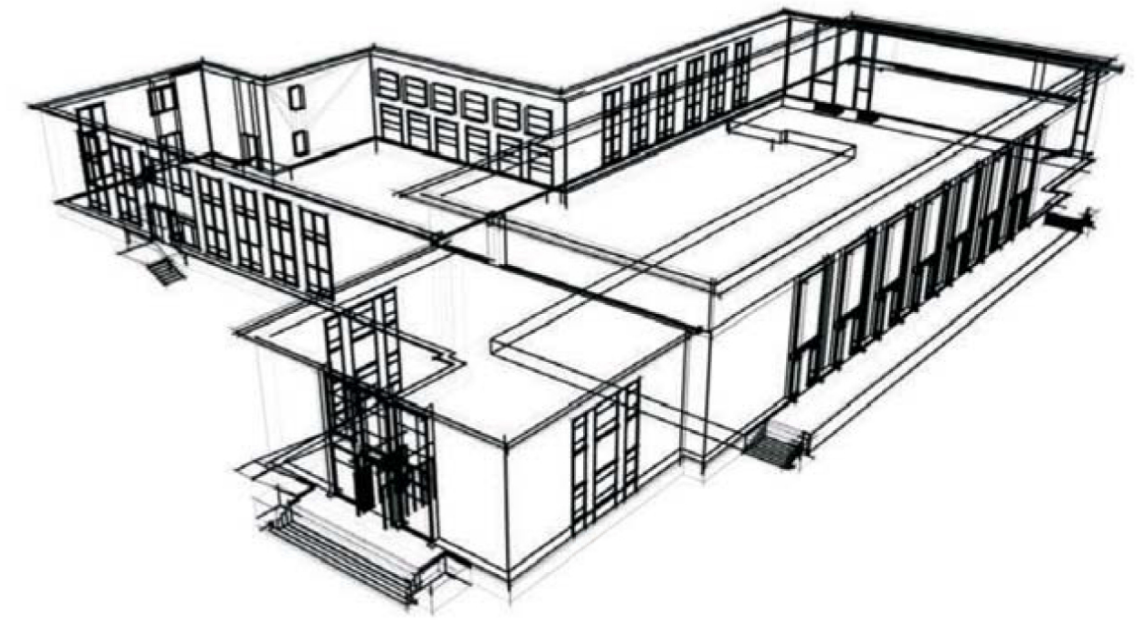

## ■ Master Planning

Our room-by-room schedules include performance figures and precise deadlines. We implement reliable quality assurance procedures.

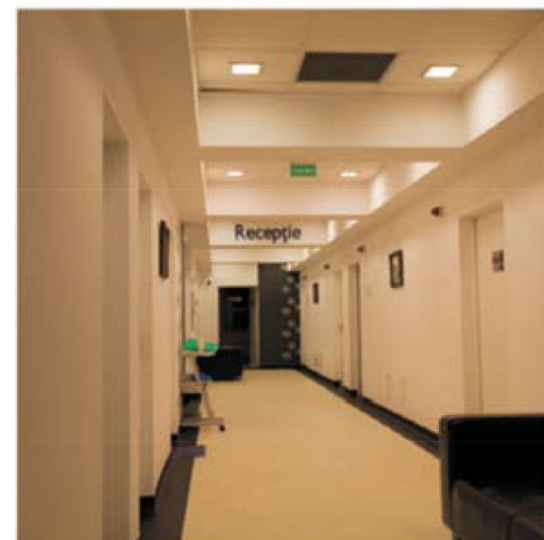

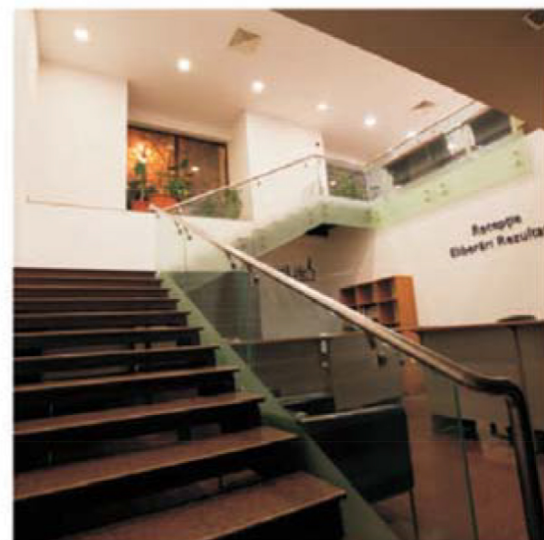

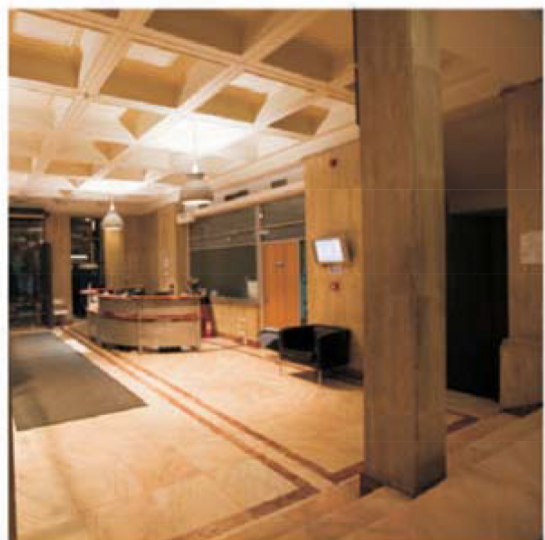

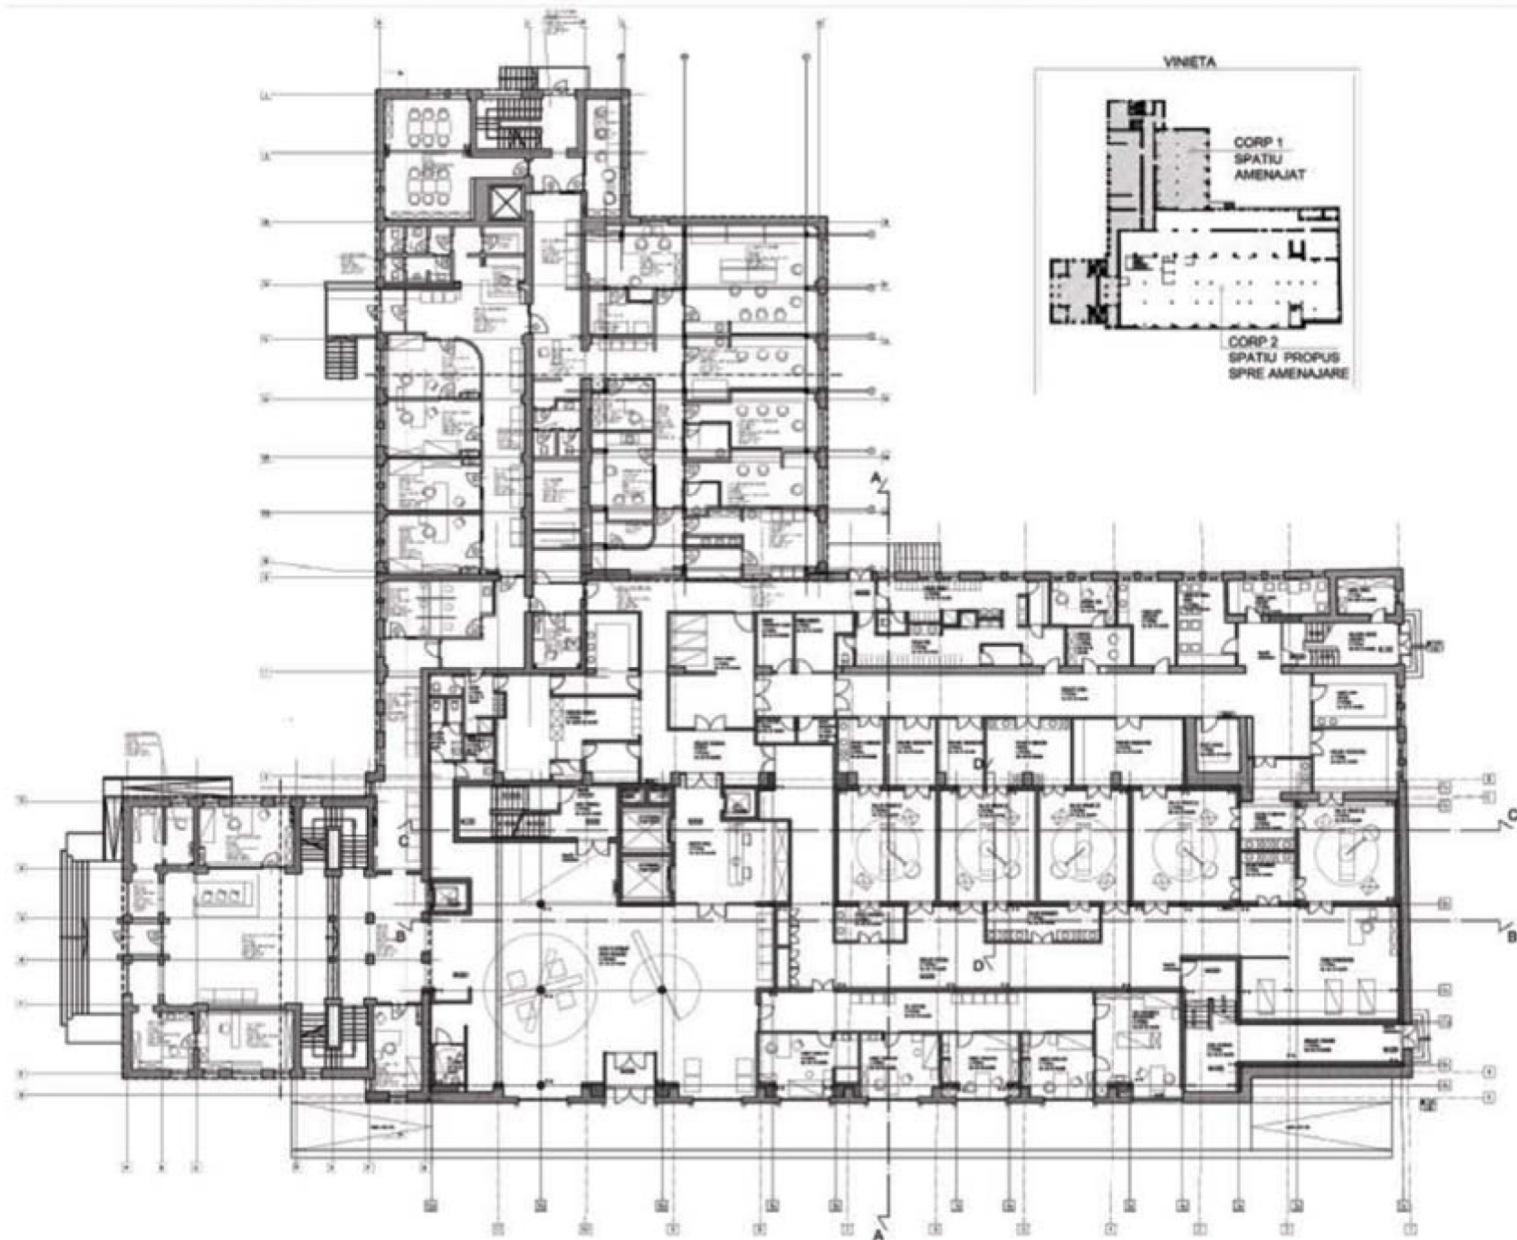

## ■ Time Management

We analyse existing building stock in terms of energy efficiency and functionality. Our sustainable approach ensures a comprehensive picture of operation costs.

SKETCH DRAWING

■ Building a hospital is a highly complex project and requires systematic planning to deliver the heterogeneity and flexibility required when such a large number of people are involved. The construction process must satisfy the needs of a number of functions: accommodation, research, teaching, medical activity, storage and administration. A proper planning methodology enables this to be done by utilising a variety of room dimensions and installations.

■ The planning team, consisting of architects, doctors, nurses, specialist engineers and administrative staff, needs to co-operate closely throughout both the planning and construction stages because the design brief could, at any time before completion, be compromised by unforeseen developments which highlight inadequacies or errors

■ Hospitals are often built in several phases or are added in stages to existing hospitals. Therefore, the design (circulation system, floor levels) and construction must be such as to allow a variety of extension possibilities.
